Great starts depend on early and consistent feed intake. Use Purina<sup>®</sup> UltraCare<sup>®</sup> MPD<sup>®</sup> pak to create high-quality post-weaning diets without having to inventory multiple high-cost ingredients.

This pak has a 25-pound inclusion rate and delivers the following ingredients to support pigs post-weaning:

- Intake-enhancing technology**  
to increase palatability and help create robust eaters
- Gut-optimizing technology**  
to support gut health and digestive efficiency
- Yucca shidigera**  
to support intestinal wellness and reduce ammonia levels in the barn environment

**Purina<sup>®</sup> UltraCare<sup>®</sup> MPD<sup>®</sup> pak is a key component to creating a complete feed that supports optimal growth, providing pigs with the nutrients needed in the mid-to-late nursery phase.**

Consistent feed intake supports immune system development during the weaning transition period, a time when pigs are exposed to multiple stressors and are particularly vulnerable to disease. **A healthy, well-developed gut functions as a barrier to disease** in the nursery and in subsequent production phases.

Robust feed intake is crucial to optimal growth post-weaning. End-of-nursery weights are a strong predictor of finishing weights. Research at the Purina Animal Nutrition Center indicates that every **1-pound difference at day 32 post-weaning correlates to a nearly 2.1-pound heavier pig at finishing.**<sup>1</sup>
